MINI PROJECT

PROBLEM STATEMENT :

model is suitable for Flight Price Prediction

Importing Packages

In [1]:

```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
```

Read The Data

In [2]:

```
traindf=pd.read_csv(r"C:\Users\munigreeshma\OneDrive\Desktop\greeshma\Data_Train.csv")
traindf
```

Out[2]:

CONCLUSION

In the Flight Price Prediction dataset project ,we have to find the best model after applying linear regression,logistic regression,decision tree and random forest we have observed that the DECISION TREE is the best model because the dataset i got is 93%accuracy.In Linear Regression i got 41% accuracy,In Logistic Regression i got 43% accuracy,In Random Forest i got 33% accuracy. By implementing all models on the dataset, i conclude that DECISION TREE is the best ,model for Flight Price Prediction dataset,because it got high accuracy by comparing all otherws models.
